## **We at Evonprint have set up a number of in company projects to reduce our impact on the environment**

**Our focus** towards a greener future has provided numerous ideas and cost savings to the benefit of our staff and customers.

**Our factory** has one of the highest levels of Thermal insulation as you would expect from a modern industrial unit.

**By simply changing** shift patterns many of our staff have cut their fuel costs and journeys to work by 40%.

**We plan ahead** our purchases of raw materials to cut suppliers transport costs by shipping paper direct from the paper mill in maximum lorry loads. This alone has reduced truck journeys by over 90%.

**The use of vegetable-based** inks has further reduced our impact on the environment.

**Recycling.** Every sundry product we use in the process of printing is supplied in some form of packaging from cardboard, wooden pallets, plastic containers and wrappers. Each waste product is separated and sent away to be recycled. This represents 93% of our waste.

**Waste.** We work hard to reduce the generation of waste. This is far more important and cost effective than recycling.

**Power consumption.** We have reduced the amount of power per printed sheet by 17%. This has been achieved by the efficiency of perfecting and the modern engineering.

**Our deliveries** are planned to reduce waste and enhance efficiency.

**All our vans** have a low CO2 emission allowing them into London without a premium.
